Fisheries Certificate Schedule

Gulf of Alaska Pacific Cod Longline Fishery

Client/Certificate Holders:
Alaska Fisheries Development Foundation

Management System: Pacific cod are managed under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act, MSA), with management recommendations from the North Pacific Fisheries Management Council (NPFMC) and implementation through the National Marine Fisheries Service (NMFS). Under the MSA, the NMFS must manage fisheries to maintain optimum yield (OY) by rebuilding overfished fisheries and preventing overfishing. Alaska manages a small portion of the Pacific cod fishery in state waters.

Chain of Custody: Traceability of product to the point of offload is excellent, and BSAI Pacific cod may enter the MSC certified chain of custody. Product is generally processed at sea and landed as headed and gutted, frozen fillet blocks and individually frozen fillets; unprocessed fish may be landed at on-shore processing facilities. Chain of custody starts after the first point of sale; the first purchaser must obtain CoC certification. All licensed Pacific cod fishing vessels in the GOA may participate in the fishery.
